CHAPTER 1

Introduction

Reading should give you room to think. A well-designed workspace keeps the document at the centre, with actions within easy reach.

This demonstration contains original sample writing. It does not reproduce the commercial books shown in the Library.

CHAPTER 2

The shape of attention

A clear screen helps readers follow an argument. Navigation provides context while the text stays uninterrupted.

Readers want access to their notes, but they also want space for concentration.

CHAPTER 3

A purposeful workspace

Each tool should appear where a reader expects it. Search, navigation and annotations should remain consistent.

Saved passages need locations so readers can return without searching again.

Affordances and Signifiers

Good design makes an action clear. A labelled control should explain what happens next. When a choice feels ambiguous, readers spend time working out the interface instead of reading.

Signifiers work with familiar experience to guide behaviour. A clear selection state tells a reader what has changed.

The most helpful reading tools remain nearby without competing with the document. Readers should be free to focus, annotate, and continue.

CHAPTER 5

Reading for understanding

A highlight records a passage worth returning to. Notes give the reader a place to explain why it matters.

Bookmarks serve a different purpose. They remember a location, even when the reader has nothing to add.

Making progress

A reliable progress indicator reports the reader's place in the document. It should update after scrolling, paging or using a chapter link.

Progress should resume when the reader returns.

Visual material

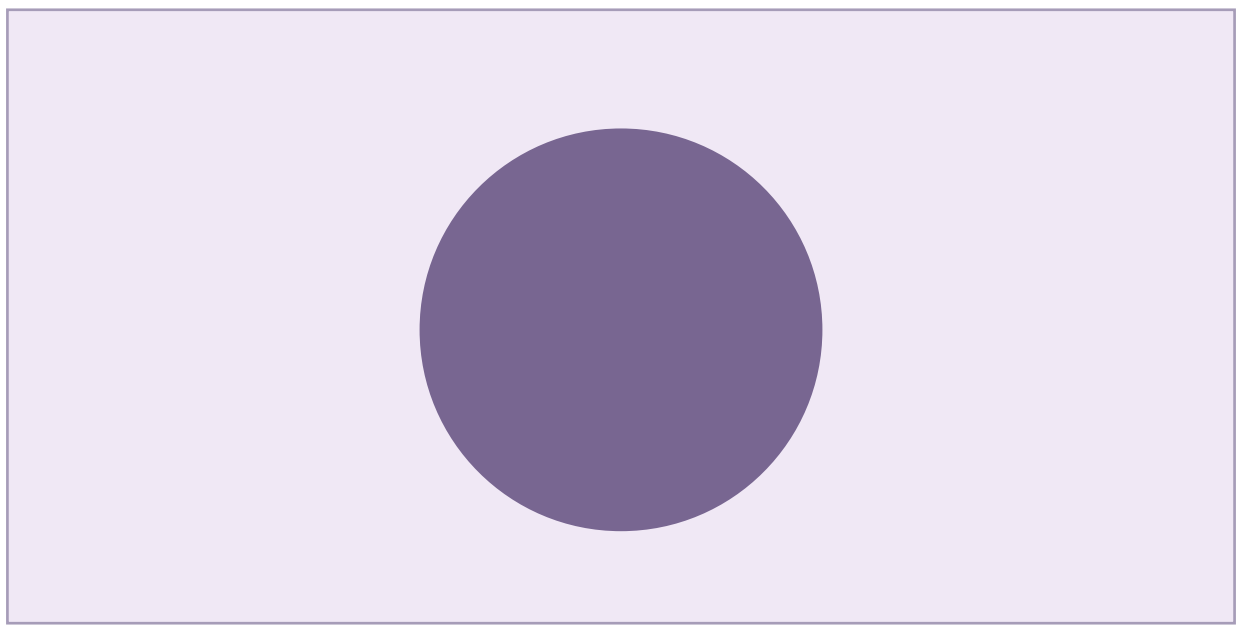

Illustration: a shape that guides attention.

Illustrations convey structure that prose cannot. Image-heavy pages need reliable rendering and should not be reduced to plain text.

CHAPTER 8

Remembering an idea

When readers return to an important passage, the workspace should take them back to its source and show the context around it.
